Role: Solution Architect| Testing Quality Lead |Service Virtualization SME | Platform Engineer |DevOps Engineer| AI Generalist

Key skills

- **Operating System**: Windows, Linux
- **Programming Language**: C, C++, C#, Visual Basics, Java, Groovy, Mainframe(COBOL), Python, HTML, CSS, Shell scripting, Java Script
- **Virtualization Tool**: Mocking Solution-CA LISA, DevTest, SV-SSP
- **Database**: ORACLE, MY-SQL, DB2, POSTGRESQL, Maria DB
- **AI:** Prompt Engineering, Context Engineering, Generative AI, Agentic AI, LLM, Lang chain, AWS Bedrock, AI Agents, RAG, MCP, Antigravity, n8n, AI Workflow, Gemini Enterprise, AI Workflow Automation, Power Automate, Voice Agent, Chatbot, Claude, OpenAI Codex
- **DevSecOps**: Tortoise SVN, Gitlab, Bitbucket, Bamboo, Maven, New Relic, Splunk, Jenkin, New Relic, CICD Pipeline, Docker, Kubernetes, SonarQube, Veracode
- **Project Management**: ALM, JIRA, Confluence, HP QC, defect & incident management
- **Other tools**: Putty, Winscp, Eclipse, IntelliJ, Visual Studio, Tomcat,

Summary

12+ years of overall successful IT experience in Telecom Industry spanning IT and IT enables services. Recognized consistently for performance excellence and contributions to success in Telecom industry. Proven success in leadership, operational excellence and organizational development with keen understanding of elements of business. Excellent reputation for resolving problems, improving customer satisfaction, and driving overall operational improvements.

Career history

Service Virtualization & Platform Architect at Cognizant Australia, Melbourne

Oct 2019 – Current

Positioned at role of Quality Engineering Lead for Cognizant Technology solutions having technology specialization in area of Quality assurance, with a strong focus on Service Virtualization of E2E Applications.

Key responsibilities

- **Led cross-functional engineering teams** (9–10 members) delivering high-impact solutions across Legacy, B2C, and B2B platforms, supporting over 31 critical applications for Telstra, Australia's largest telecom provider.
- **Managing Team and Stakeholder:** Led end-to-end delivery of complex telecom transformation projects by coordinating cross-functional teams, managing scope, risk, governance, and change processes, while driving stakeholder alignment, ensuring compliance and budget adherence, and improving delivery efficiency through Agile/Waterfall practices and team mentoring.
- **Architected and implemented scalable solutions**, aligning with strategic program implementation, enterprise cloud strategies and Telstra's digital roadmap, Automation, AI Solution and Products including virtualization of legacy and third-party systems to reduce operational overhead.
- **Championed cloud transformation, Migration initiatives**, providing infrastructure support across public and private cloud environments, resolving complex network and firewall issues to ensure high availability and scalability.
- **Drove DevOps adoption** by guiding automation strategies for API and microservices testing, enabling CI/CD pipelines, and reducing deployment times while improving release quality.
- **Managed critical service stacks** (Pre-Ordering, Ordering, Assurance) for NBN Co, Star Link, Opticomm and B2B Gateway

Github Copilot, Load Runner, SV-SSP

- **Cloud skill, others:** Cloud(AWS),Azure, TOP, PCF, Networking, Cyber Security, AI, Gen AI, Agentic AI
- **Queue**: JMS, Tibco, IBM MQ, Active MQ
- **Soft Skill:** Team Building & Leadership, Stakeholder Management, Mentor
- **Infrastructure**: Infrastructure Management & Server Administration-Cloud and On-Prem
- **Architect:** Design and deliver scalable, secure, and cost-optimized architectures
- **Certifications:** Gemini Enterprise and Agent Deployment, AWS Advanced Agentic AI, AI Accelerator by OutSkill

components, ensuring seamless SIT integration and production support through proactive monitoring and incident resolution.

- **Enabled agile delivery models**, embedding DevOps best practices and fostering a culture of continuous improvement, collaboration, and rapid iteration.
- **Collaborated with senior stakeholders**, business analysts, and product owners to align technology solutions with business goals, ensuring timely and cost-effective delivery of IT initiatives.
- **Delivered measurable business value** by automating manual processes, reducing cycle time, and improving system reliability through cloud-native solutions and infrastructure as code (IaC) practices.
- **Ensured operational excellence** by leading root cause analysis, implementing monitoring solutions, and driving incident response strategies for mission-critical systems.

Analyst Programmer at **Entity Solutions Pty Ltd**, Melbourne, VIC

Dec 2017 – Sep 2019

Worked as Feature Team Lead for Client Telstra in **Centre of Excellence group**

Key responsibilities

- Collaborated with Solution and Technical Architects, Business Analysts, and end users to ensure seamless integration and functional alignment of enterprise solutions.
- Delivered high-quality application support under pressure, resolving incidents and system issues with a customer-first mindset and professional approach.
- Facilitated end-to-end solution design by coordinating with cross-functional teams and participating in domain-specific workshops to ensure architectural consistency.
- Led coordination between onshore and offshore teams across project phases, ensuring timely and successful delivery of business-critical features.
- Developed reusable, environment-agnostic components to promote scalability, reduce technical debt, and accelerate development cycles.
- Contributed to the evolution of testing methodologies by identifying automation opportunities, reusable assets, and scalable frameworks that reduced maintenance costs and improved delivery efficiency.

Test Engineer at **Infosys Ltd.**

Oct 2015 – Dec 2017 (Infosys, Australia)
Feb 2014-Oct 2015 (Infosys, Mysore, India)

Worked as SV developer and tester in Infosys.

Key responsibilities

- Developed service virtualization solutions, Stubs to simulate high-cost third-party systems, significantly reducing testing costs and enabling faster, dependency-free end-to-end testing.
- Integrated virtual services with OKAPI and downstream systems to support comprehensive integration testing across multiple environments.
- Collaborated with QA teams to design test strategies, determine automation feasibility, and build test scripts that enhanced coverage and optimized execution time.
- Built health check services and monitoring tools to proactively detect service disruptions and ensure high availability of virtualized environments.
- Provided hands-on support during test execution phases, troubleshooting deployed services and ensuring smooth delivery across project milestones.
- Coordinated with onshore and offshore teams to create a bridge, aligning with architectural standards and supporting evolving business requirements.
